

ALUMACRAFT®

1946-1986 • 40 Years of Building Quality Aluminum Boats

SUPREME Series

Three boats that offer you supreme boating pleasure whether you're chasing your favorite fish or just after a fun-filled day on the water. We call them Supreme not only for their quality construction but also because of their royal features: smooth riding hull, walk-through windshield, upholstered pedestal and sleeper seats, plush marine carpeting, livewell with pump, lockable storage and much more.

CANOEES

The Alumacraft canoe is renowned for its ruggedness and durability. Quetico cruising models are lightweight and easy to handle in lakes and rivers. The Quetico White-water combines toughness with a $\frac{3}{8}$ " deep flat keel for top performance in fast, shallow water. Alumacraft also offers a quality camper outboard canoe and the ultralight, 57 lb. Voyager canoe.

Why Alumacraft is America's premier canoe

① **Overlap design**... each side of the hull is pre-formed, overlapped on the center seam, and spot-welded for greater strength.

② **Flat bottom**... a flat bottom provides greater stability and easier paddling than a rocker bottom design.

③ **Spotwelding**... aircraft-tough spotwelds on ribs, gunwales and center seam eliminate rivet shearing, drag and leakage.

④ **Stronger stems**... made of .090 gauge solid aluminum, they're thicker and stronger to stand up to rocks, gravel and other obstructions.

⑤ **6010 Marine alloy**... lightweight, this remarkable space age alloy is heat treated for greater durability and resistance to punctures and wear.

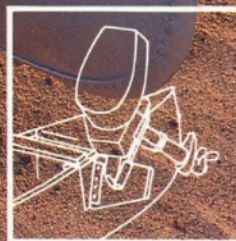

Plus... built in carrying yoke (6) on most models, gas resistant foam flotation (7), rugged roll seat design (8), distinctive Indian trim decal (9), and stainless steel tie-down eyelets (10).

MV JON BOATS

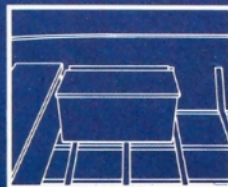

MV Tex III
with optional
storage compartment

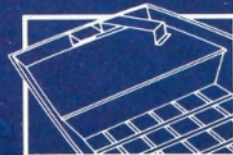

Thanks to the extremely durable 5052 alloy, you can expect years of service from your Alumacraft jon boat. You can get excellent puncture protection and dent resistance in these lightweight workhorses. They double as ideal sport boats for fishing and duck hunting and as a utility boat for chores that must be accomplished on the water. The 5°V bottom to the transom gives you better handling and a smooth ride.

Celebrating 40 years of craftsmanship.

Since the first Model B came off the assembly line in 1946, Alumacraft has earned a reputation for building America's top quality aluminum fishing and pleasure boats. Over 9,000 of those first Model B's were built and many of them are still helping their owners catch fish today.

The tradition of quality that began with the Model B has continued, and through 1985 Alumacraft has built more than 400,000 boats and canoes for quality minded fishermen, boaters and canoeists. Not only are most of these boats still providing fishing and boating pleasure, many are

worth more today than when they were purchased.

Over the years, Alumacraft's reputation for quality has spread throughout the United States and today plants in Minnesota and Arkansas run at capacity production with boats being shipped throughout the United States and Canada.

In 1986 the Alumacraft name is on more than 65 different models of semi-vees, bass boats, jon boats and canoes. Best of all, they're built in the famous Alumacraft tradition of quality. The Alumacraft boat of your dreams is waiting for you at your Alumacraft dealer.

The Alumacraft semi-vee difference.

1 Highest grade marine alloys...are used to greatly increase strength, puncture resistance and wear.

2 Center Keel...one piece extending from the transom area to the top of the bow for greater strength. Reinforced at the point of wear with $\frac{1}{4}$ " of solid aluminum to handle years of abrasive beach landings.

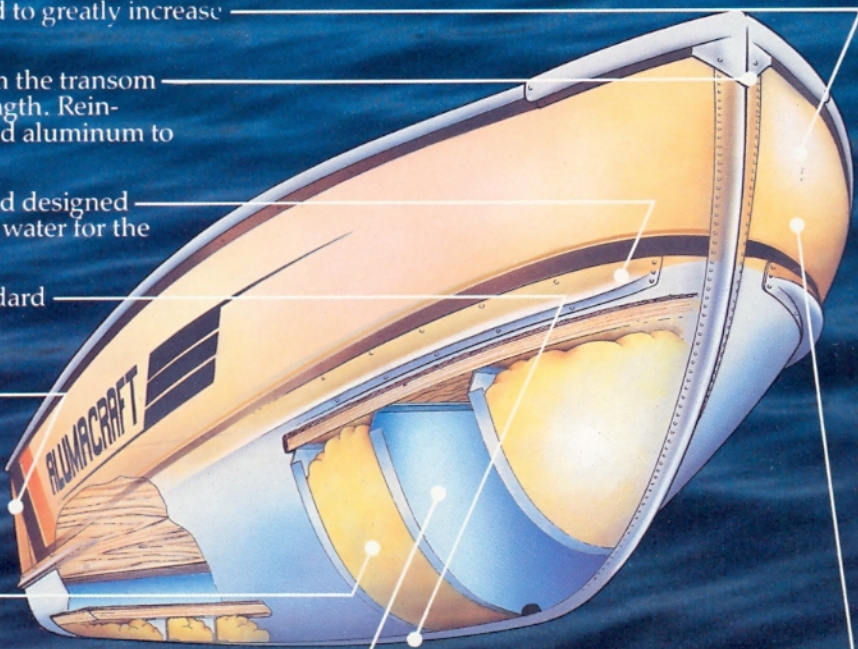

3 Sprayrails...strategically positioned and designed with a concave underside to really deflect water for the driest possible ride.

4 Spot welded and riveted seams...standard with most models for extra durability and dependability.

5 Aluminum clad transom...wood is dipped in preservative to prevent deterioration and clad on both sides with thick aluminum (.090 in most models) to eliminate maintenance, minimize vibration and noise levels, and assure dependable performance.

6 Foamed in place flotation...provides for a quieter ride and greater structural integrity.

7 Heavy gauge aluminum transverse and longitudinal framing...formed to the hull bottom to provide maximum structural support. Standard on all Supreme, Luxury Series and Lunker SS Series boats.

8 Urethane finish...super tough, high gloss finish resists corrosion and wear for years of trouble free good looks.
